A mathematical proof is an inferential argument for a mathematical statement, showing that the stated assumptions logically guarantee the conclusion.The argument may use other previously established statements, such as theorems; but every proof can, in principle, be constructed using only certain basic or original assumptions known as axioms, along with the accepted rules of inference.

Mathematical proof - Wikipedia
prove P(x). Once we reach the conclusion that P(x) is true we retract the declaration of x as arbitrary and conclude that the statement "for all x, P(x)" is true. Furthermore, to prove more complex statements these structures are often combined, not only by listing one after another, but also by nesting one

When the temps start to drop, I start craving all of my favorite comfort foods. That means more soups, more pot roasts and—in particular—a lot more fresh homemade bread to go with both. However, when it's chilly outside and in, making yeasted bread at home becomes more challenging. That's because yeast does its job best at temperatures above 75F.

Four principles. How to Solve It suggests the following steps when solving a mathematical problem: . First, you have to understand the problem.; After understanding, make a plan. Carry out the plan.; Look back on your work. How could it be better?; If this technique fails, Pólya advises: "If you can't solve a problem, then there is an easier problem you can solve: find it."
