The iPhone has always been a great tool for photographers to carry everywhere. As well as being able to predict the weather, control your DSLR and calculate exposures, the iPhone has a great camera. Unfortunately, that camera had some major shortfalls: you couldn't manually control the camera's shutter speed, ISO or exposure. iOS 8, however, has changed all that.

What You Can Control. Your iPhone doesn't give you full manual control over every possible setting. In particular, the aperture and focal length of the lens are fixed to f/1.8, as well as to a full frame equivalent of 26mm (for the wide angle lens) and 51mm (for the telephoto lens). This means you have to control exposure using either shutter speed and ISO or exposure compensation.
