Thermal Energy 12 Study Guide

Thermal energy refers to the TOTAL energy of all of the particles in a substance. Therefore, the thermal energy of a substance depends on the amount, while the temperature does not. Heat is the transfer of thermal energy from one object/substance to another, which results in a temperature change. Click again to see term ☐☐

The more efficient a device is, the more work it can do for the amount of energy it uses. Less energy is wasted because that energy does not get converted and released as thermal energy. Efficient products waste less energy and so can use less energy, making them cheaper to operate. 12 16 12 12 12 12 12 Study GuideTeacher Support

Quiz & Worksheet - Properties of Thermal Energy | Study.com

Thermal energy. Thermal energy, internal energy present in a system in a state of thermodynamic equilibrium by virtue of its temperature. Thermal energy cannot be converted to useful work as easily as the energy of systems that are not in states of thermodynamic equilibrium. A flowing fluid or a moving solid, for example, possesses energy that can be converted to work in some mechanical device, such as a windmill or a waterwheel, but the same fluid or solid in a thermodynamic equilibrium ...
